

FusionExport Case Study

Export Live JavaScript Dashboards & Charts Anywhere. Anytime.

Supports FusionCharts, HighCharts, D3.js or any other JavaScript Charting Library, even your in-house ones!

"There are very few software tools or products I have worked with over the years which have been as powerful and easy to use as FusionExport and FusionCharts. Thank you so much for making my life easier!"

Mike McCall , CTO & Co-founder

 FacilitatePro.

Meet FacilitatePro.

Facilitate.com is based in Santa Barbara, CA. FacilitatePro is a software product of Facilitate.com that helps groups brainstorm and evaluate ideas, from any device, anywhere, anytime. FacilitatePro speeds idea generation and data collection, leaving more time for creative thinking and analysis. The entire group process, from generating ideas to prioritizing and selecting those with merit, is instantly documented so that the best ideas become real solutions.

In addition, FacilitatePro includes sophisticated tools for voting and surveying as well as action planning. Facilitate has a large client portfolio, including Lockheed Martin Company, Eastman Chemical, Disney Institute, Ally Bank and the U.S Army, Navy, NASA, and the Social Security Administration.

The Need to Export Dashboards

When did you realize the need for a Dashboard Export solution?

We were looking to develop new and more sophisticated FacilitatePro reports which could be exported into a PDF or Microsoft Word format. As part of this requirement we needed to be able to easily produce graphic voting and action planning data in a jpg or png format.

What were you using before you discovered FusionExport?

We had been using third party tools to produce some of these graphics in our reports. They were very limited in capability however.

How did you discover FusionExport?

We have used FusionCharts in the past. Though we loved it we found the inability to easily export the data into jpg and png format limiting. When we learned of FusionExport, its ease of use and power we were excited and wanted to move ahead immediately.

FusionExport Implementation Timeline

Day 1

1

Discovered FusionExport

Day 3

2

Integrated into app and test

Week 2

3

Successful set-up of FusionExport in initial version

How long did it take to implement FusionExport in your application?

We couldn't believe how easy it was to implement FusionExport into our product. In only a few days we had it integrated into our application. From there we were able to go ahead and begin implementing all of its and FusionCharts capabilities. We had those pieces working in an initial version in a few weeks.

How effective was our Support Team & Documentation?

Support:

The FusionExport and FusionCharts team has been unbelievably supportive. We had a few questions initially on how to integrate the two products and the FusionExport support staff were extremely responsive in working with us. Every question we had was addressed in less than 24 hours!

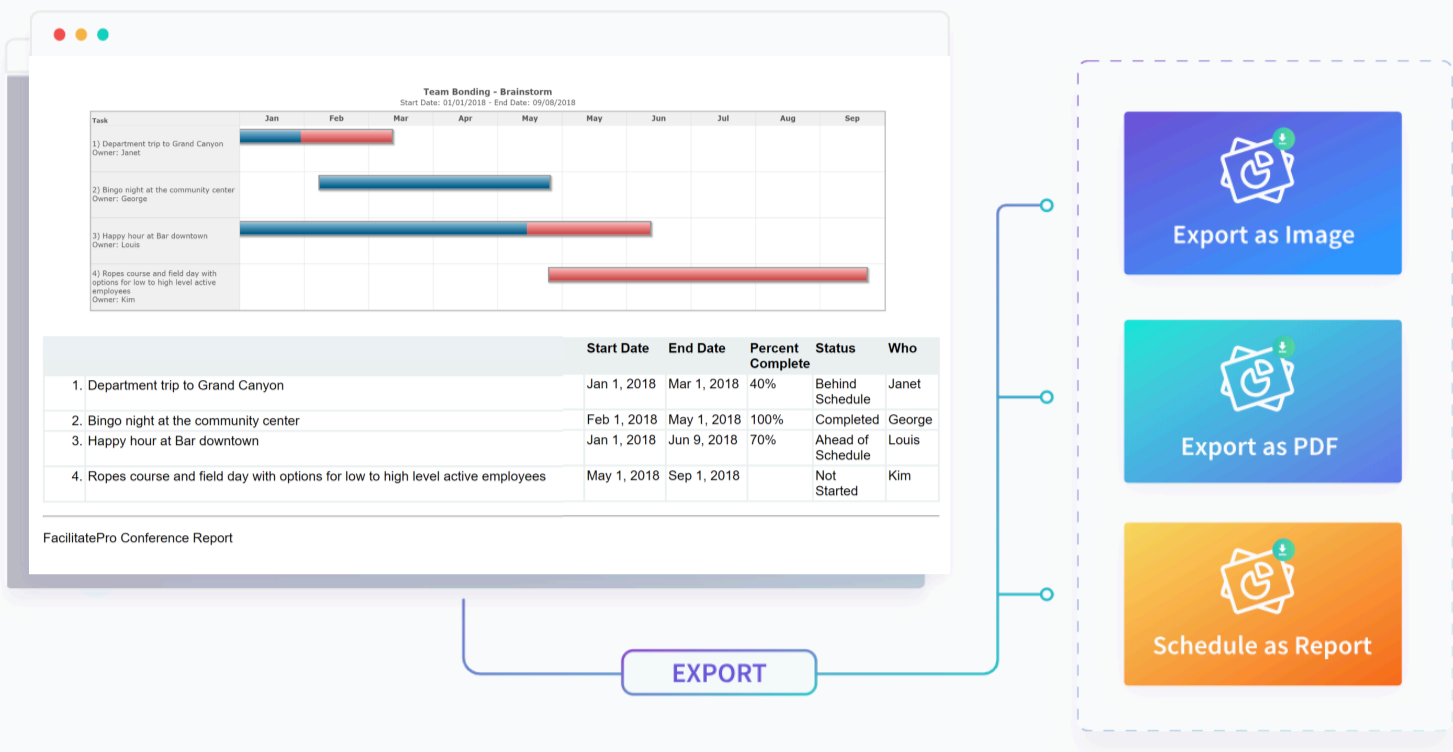

Documentation:

The online documentation and code samples were incredibly valuable as well. These also gave us great ideas for how we could do things we hadn't yet even thought of.

Time to showcase results!

FusionExport has tremendously enhanced the usability and value of FacilitatePro. Our reporting had been one of the weaker elements of our product. We are so happy with what FusionExport has allowed us to achieve that we are going to feature it in our upcoming new version.

How was your overall experience with FusionExport?

Mike McCall, CTO & Co-founder, Facilitate.com

We have worked with FusionCharts for over 8 years and have found their product to be of the highest quality and their support fantastic. The only thing we recently felt to be missing was an easy way for us to produce the numerous charts it provides as standalone graphic files for inclusion in Word or PowerPoint documents. With the recent introduction of FusionExport we can now easily accomplish this. It has dramatically enhanced the look of our reports and presentations and we have received very positive feedback from our clients about this new capability.

First class support was key to us because we have a somewhat unique environment. The support engineers on the FusionExport team provided exceptionally responsive, efficient and highly effective support. It enabled us to quickly implement FusionExport even in our unique environment. Every question we had was addressed in less than 24 hours. Given the issues of global time zones we were impressed to find how flexible they were to work with us directly by phone at times which were convenient for us.

How can FusionExport help you?

FusionExport allows you to export and share full dashboards in your products or internal apps to PDFs or images, and send them as emails to your teams or customers. FusionExport easily installs and works with FusionCharts, HighCharts, D3.js, Charts.js or any other JavaScript charting library and includes SDKs for Java, Node.js, C#, Go and many more. You can even add custom branding elements like your logo, colors and additional data tables to make your email reports stand out and insightful!
